ABC Historical Reconstruction
Self-contained evidence and entry packet

29 September 2026. This packet replaces the underspecified work packet. It contains a conservative row inventory and all 15 original evidence pages from the available PDF. The photographs are the primary evidence; this transcription is a review aid. No ABC entry is authorized solely by the presence of a row here.

Work instruction

Capture → Transcribe → Allocate → Validate → Enter. Inspect existing ABC workers, boats, projects, jobs, pieces and materials before proposing a destination. Show Source → proposed destination → hours or quantity → classification → uncertainty before the final Save action. Ask before saving any uncertain entry. Preserve each paper daily total as a control. Never split an unallocated remainder by subtraction or evenly among listed activities.

Confirmed = directly supported by paper or a user correction. Probable = a strong but unconfirmed reading; hold for review. Unresolved = insufficient evidence; do not enter. A clear quantity with uncertain material or destination is still held. Blank quantities and units are not zero. An 8-hour control total is not an allocation.

Corrections and mapping gates

Subject	Instruction
Mysorah	Use corrected spelling, not Mazura. Match an existing ABC vessel only after verifying identity.
Taller	Workshop/location, not a yacht. ABC contains Taller – 27.04.2026 and Taller – 29.04.2026. Do not select either based on the date in its name. Mapping required.
Kimura 2	Preserve this corrected name. Do not automatically merge with Kimmora/Kimmuro or another Kimura record.
Normal / Extra	Where the historical paper records ordinary worked time with no Extra indication, propose Normal for review. Do not classify Extra without evidence or fabricate a reason.
Training and van	Curso Seguridad is training. Van/furgoneta activity at Taller stays workshop activity; the van is not a yacht.
Piece translations	Port Capping Rail = Regala de babor; Starboard Capping Rail = Regala de estribor; Stern Capping Rail = Regala de popa. Verify onboard destination and existing piece before any change.
Source scope	The 15 evidence pages below came from the supplied 20-page PDF. The 22 failed separate attachments are not represented; do not assume they are in this packet.

ABC observations to verify again before entry

At inspection, ABC showed Miguel Angel Morales Vera with an existing 1.5h Normal time record on 21 September under Kimmora 2 – 21.09.2026 and 3.0h Normal on 22 September under Kimmuro 2 – 17.09.2026. These spellings and project identities need verification against the paper; do not count a record as reconciled merely because its date and hours fit. Candidate workers Ajihadomarco, David Pedrosa Hurtado and Frederico Agusti Berger require identity checks against AJ, David Bradoza and Fede/Freddy. These are observations, not approved mappings.

Labour: row-level allocation ledger

Dates below are September 2026 unless stated. “Source total” is the paper control, not a new ABC record. A slash in the activity column lists multiple paper activities but does not assign hours. All rows are Save = HOLD until ABC mapping and batch review. Where the paper job hours are clear, the hours column records only those explicitly written.

Materials: literal line inventory

Each listed line is a separate notebook line, in top-to-bottom order within its heading. Values before “|” are the visible quantity tokens; a question mark means unreadable or omitted. Brand, size and colour remain part of the literal description. The user must verify product, unit, boat/project and Normal/Extra in ABC. Notebook headings marked P/AP are preserved as markings, not interpreted as Normal/Extra. All lines are HOLD. Page 20 has a year that appears to be 25; date is unresolved and no 2026 date is inferred.

Entry controls / reconciliation

Do not create a material from a probable handwriting reading. First match exact existing material, unit, date, boat and project. If more than one plausible match, list both for user choice. Never infer price or an extra reason. Stop on an uncertain record. Keep unresolved lines in the ledger, not ABC.

Labour batch review starts with Miguel 21 September: source daily control 8.0h; Taller 3.5h confirmed by user; ABC destination mapping required; Normal proposed; remaining paper activities unresolved. No final Save until the specific record and classification have been shown to the user. On 22 September, Taller 3.0h is likewise confirmed but mapping remains required.

Evidence appendix

The following pages are the original evidence pages 6–20 of the supplied work packet, without cropping or changes. Pages 6–14 are labour; 15–20 are materials. The photographed source remains authoritative where this literal reading is uncertain. Some photographs are sideways; rotate the PDF view for reading.
